

main saw  
gives power to all  
toggle switch only  
turns power feed.  
motor on or off, &  
will only work  
when the saw's  
main switch is on

(Plug) Source black to switch to motor L1 with a  
pigtail black from switch to outlet  
Source white to outlet to motor L2  
Source ground to switch ground, outlet ground  
double gang box ground to motor grd.

what I need:  
to wire the power feed motor, which only  
has 2 wires, to the power feed toggle switch,  
which also only has 2 wires, and the  
power source for this has to come from  
the saw motor (L1 & L2)
